13. Financial Instruments

The fair values of the Company's cash and cash equivalents, short-term investments and interest receivable, GST and VAT receivable, prepaid expenses and deposits and accounts payables and accrued liabilities approximate their carrying values.

The Company's financial instruments are exposed to certain financial risks, including currency risk, credit risk, liquidity risk, interest risk and commodity price risk.

(a) Currency risk

The Company's property interests in Mexico make it subject to foreign currency fluctuations and inflationary pressures which may adversely affect the Company's financial position, results of operations and cash flows. The Company is affected by changes in exchange rates between the Canadian Dollar and foreign functional currencies. The Company does not invest in foreign currency contracts to mitigate the risks.

(b) Credit risk

The Company's cash and short-term investments are held in large Canadian financial institutions. Short-term investments are composed of financial instruments issued by Canadian banks. These investments mature at various dates over the current operation period. The Company does not have any asset-backed commercial paper in its short-term investments. The Company's GST and VAT receivable consists primarily of goods and services tax due from the federal government of Canada and value-added tax due from the government of Mexico.

(c) Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company manages liquidity risk through the management of its capital structure.

Accounts payable and accrued liabilities are due within the current operating period.

(d) Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The risk that the Company will realize a loss as a result of a decline in the fair value of the short-term investments is limited because these investments, although available for sale, are generally held to maturity.

(e) Commodity price risk

The ability of the Company to explore its mineral properties and the future profitability of the Company are directly related to the market price of gold and other precious metals. The Company has not hedged any of its potential future gold sales. The Company's input costs are also affected by the price of fuel. The Company monitors gold and fuel prices to determine the appropriate course of action to be taken by the Company.

14. Management of capital risk

The Company manages its cash and cash equivalents, common shares, stock options and warrants as capital (see Note 8). The Company's objectives when managing capital are to safeguard the Company's ability to continue as a going concern in order to pursue the exploration of its mineral properties and to maintain a flexible capital structure which optimizes the costs of capital at an acceptable risk.

The Company manages the capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of the underlying assets. To maintain or adjust the capital structure, the Company may attempt to issue new shares, issue new debt, acquire or dispose of assets or adjust the amount of cash and cash equivalents.

In order to maximize ongoing exploration efforts, the Company does not pay out dividends. The Company's investment policy is to invest its short-term excess cash in highly liquid short-term interest-bearing investments with short term maturities, selected with regards to the expected timing of expenditures from continuing operations.
